SKILLS

Java Spring Boot Spring Security & JWT REST APIs
React Angular Flutter (Dart) Electron MySQL
Git & GitHub Docker Agile methodologies
Problem solving

LANGUAGES

Spanish Native
English B2

PROFILE

Junior Full Stack Developer who designs and builds complete systems end to end, from the database and REST API to web, mobile and desktop clients. Built GEA, a university events and announcements platform (Spring Boot, React, Flutter, MySQL), and FarmStock, an offline-capable inventory system for a SENA farm (Spring Boot, Electron). SENA-trained in Systems Analysis and Software Development. Looking to join a development team where I can contribute proactively and keep learning.

EXPERIENCE

Software Developer

January 2026 – June 2026

Universidad Libre, Cúcuta Campus · Cúcuta, Colombia

- Designed and developed GEA, a modular platform (5 modules) for event and announcement management, publication and moderation, plus a mobile app for end users.
- Owned the full development lifecycle independently: system design, architecture, backend, frontend and database.
- Built the REST API with Spring Boot and Spring Security (JWT, role-based access), consumed by a React web app and a Flutter mobile app.
- Modeled and administered the MySQL database and added change auditing with Hibernate Envers.
- Documented the API with Swagger/OpenAPI and prepared Docker-based deployment.
- Managed version control with Git and GitHub across three repositories (web, mobile and backend).

EDUCATION

SENA (Servicio Nacional de Aprendizaje), Cúcuta

2024 - 2026

Systems Analysis and Software Development Technologist

SENA (Servicio Nacional de Aprendizaje), Cúcuta

2021 - 2023

Systems Technician

PROJECTS

FarmStock

2025

Offline Inventory System · Spring Boot, Electron, MySQL

- Designed and built, independently, an inventory system for the tools and equipment of a SENA farm in El Zulia, where internet access is unreliable.
- Developed a desktop app (Electron) and a REST API (Spring Boot, MySQL) covering tools, loans, maintenance, apprentices, computer equipment and statistics.
- Added offline support: the app runs locally and falls back to local storage when the backend is unavailable.
- Implemented QR code generation for each tool unit, PDF report export and email notifications.
- Wrote unit, integration and performance tests.

GEA

2026

Events & Announcements Platform · Spring Boot, React, Flutter, MySQL

- Built a web platform (5 modules), a Flutter mobile app and a REST API for managing events, announcements, spaces and reservations at Universidad Libre, Cúcuta Campus.
- Implemented JWT authentication with role-based access, change auditing with Hibernate Envers and API documentation with Swagger.
- Organized the work in three GitHub repositories (web, mobile and backend) with Docker-based deployment.
